

An aerial photograph of a mountain range with patches of snow and a braided river system. The mountains are covered in green vegetation and snow. The river is a complex network of channels and sandbars. The sky is clear and blue.

PANGEEA

MVK+NATURE
powered by
THE PLACEMAKERS

The kitchen, a gathering place to come together, fulcrum object of the home and family life, becomes natural starting today.

MVK+NATURE

Nature. Beauty and well-being.

Nature is a combination of strength, sweetness and energy. An ever-changing environment, a vital cycle that never ceases to amaze with its beauty.

For millions of years, human beings, enchanted by the majesty of nature, have lived in symbiosis with nature and have drawn well-being and serenity from it; even today, if we are in the open air, we feel a sense of peace.

Looking at nature, everything is inspiring.

Nature with its infinite beauty is the
inspiring muse for the new
MVK+ITALIA outdoor kitchen.

Woods, stones, sky, water, leaves and earth
are the elements of nature that surround us,
filling our eyes with wonder. An environment
made up of ever-changing colors and materials
that make every corner of nature
something to be discovered.

A material in perfect harmony with nature.

Pangea gets its unique character from UHPC, the ultra-high-performance concrete born from the combination of 12 raw materials that create a 100% recyclable material free from resins and binders, other than cement and stainless metal fibers.

It's a "green" material, both in its composition and in its special processing that involves highly sustainable methods.

The beauty of imperfections.

UHPC can show cloudy effects of a non-uniform color, typical of concrete, as well as slight cracks caused by the evaporation of the humidity contained in the mixture during the drying phase.

These effects are apparently imperfections but, indeed, they are the pluses of this material as they make it look very solid and natural, evoking the beauty of natural stones.

Extraordinary characteristics.

UHPC is the result of a mixture that includes concrete, very fine natural aggregates, a complex balance of additives and stainless steel fibers (glass fibers can also be added as needed).

The mixture is characterized by good fluidity and very high mechanical properties: resistance and durability are guaranteed by a homogeneous and compact texture that combines a high performance with compression that can exceed 150 MPa and deflection up to 46MPa in the case of special mixtures. The finished product is treated with a nanotechnological protective coating, which guarantees protection from the weather and aggressive materials such as oil, vinegar or wine.

Natural pigments with the colors of nature.

The characteristic gray color of concrete can be diversified to create a customized product suitable for the place where it will be used. The coloring process involves the use of colored pigments of natural origin that are amalgamated with the UHPC mixture in the first phase of the process to ensure a solid color to the whole surface. Depending on the amount of pigment that is used, any color shades, from the most intense to the lightest, can be achieved.

A color palette inspired by nature.

The colors of nature are fascinating suggestions from which MVK+ITALIA took inspiration to develop the visual language of Pangea. The environment around us is just like a color palette of infinite hues; among these, MVK+ITALIA has selected 7 colors capable of composing a color table with a perfect balance of hues. Natural colors dialogue in harmony with each other like the colors of nature itself.

An innovative visual language for the typical aesthetics of the kitchen world, even outdoors.
